

Sterling and Wilson launches the revolutionary IAQURE; expands its HVAC offerings

September 21, 2017; Mumbai: Sterling and Wilson, a leading Global MEP company, today announced the launch of their revolutionary solution – IAQURE, which is bound to change the face of Indoor Air Quality in India. This pioneering solution has been designed to not only ensure a germ free environment, but also have a positive impact on employee welfare.

IAQURE comprises of innovative modules that have been designed for dual decontamination, of both air and surface, to ensure not only higher kill rates (germicidal), but also a superior performance. In addition to new projects, the modules also address the constraints usually seen during retrofit applications, and allows it to be an ideal solution for existing projects or buildings. Furthermore, the PCO technology which forms a part of the solution neutralises the VOCs (Volatile organic compound) that are extremely carcinogenic and can be found in indoor air.

Commenting on the launch, **Avinash Pandit, CEO - MEP, T&D and O&M, Sterling and Wilson** said, *“IAQURE is a result of Sterling and Wilson’s commitment towards bringing the best of technological innovations to the industry. As the discussion on air pollution becomes more prominent, it is time that indoor air as a main proponent of health risks gets its due. Almost 2 – 5 times worse than outdoor air, Indoor air quality can drastically affect the well-being of the occupant. With IAQURE, we intend to mitigate these risks, and create more awareness on the impact that indoor air can have on health, well-being and productivity.”*

IAQURE has been recently GreenPro certified by IGBC (Indian Green Building Council) under the innovative category. The objective for the certification is to encourage product manufacturers and facilitate a green product market transformation. The product or solution that bears the GreenPro label is environment friendly throughout its life cycle, and empowers a customer to steer towards sustainable products and solutions.

“The GreenPro certification is a mark of the faith that the industry has shown for IAQURE. There are stringent policies and guidelines that we follow internally to ensure our products and solutions are at par with Global benchmarks with respect to performance and sustainability. GreenPro is an acknowledgement of this commitment.” **He adds.**

The solution has been extensively tested at Sterling and Wilson’s lab in Pune, incorporating best in class, time tested technology. Compact, modular and state of the art, IAQURE

provides a quick and easy installation, which is plug and play, without requiring any field wiring – ideal for projects, both new and old, across sectors.

Available as 3 or 5 years' solution contracts, IAQURE matches the Global Standard IAQ. It comes with Sterling and Wilson's world class project management and execution capabilities, along with a pan India presence and service network for aftermarket support.

About Sterling and Wilson

Sterling and Wilson is an excellent example of how the Shapoorji Pallonji family has nurtured long term associations with its business partners. The Mistry and Daruvala families have been partners in Sterling and Wilson for 3 generations. This partnership will only grow stronger, as the 4th generations of both families have recently joined the business.

Over the past 5 years, Sterling and Wilson has shown exceptional growth; with operations all over the globe, as well as an expansion in its range of services, the company's turnover has shown an extremely positive growth. From a turnover of INR 1,760 crore in 2012, Sterling and Wilson group crossed a turnover of INR 6,000 crore last year as is likely to exceed INR 10,000 crore in the year ended March 2018. From being a predominantly India focussed company in 2010, Sterling and Wilson now operates across the Middle East, Africa, Australia and Europe. In the current year, the company is expanding to the USA and South America. From being a company that was mainly focussed on doing MEP projects in India, Sterling and Wilson over the past 5 years has set up global operations in manufacture of DG sets, Gas based power plants, Waste to Energy, Turnkey data centers, Transmission and Distribution and Solar EPC. With its recent forays into Wind and Energy Storage, Sterling and Wilson is perfectly poised to play a pivotal role in the global trend of moving away from thermal plants to a future of renewable energy with storage.
